Confirm

Hemangeol[®] is a prescription medicine used to treat proliferating infantile hemangioma that requires treatment with a medicine that spreads throughout the body.

Important Safety Information for Hemangeol

HEMANGEOL can cause serious side effects, including low blood sugar (hypoglycemia), especially if your child is not taking feedings or is vomiting. The most common side effects include sleep problems, worsening of respiratory tract infections, diarrhea, and vomiting.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088. Please see Full Prescribing Information and Medication Guide for full safety information at <https://hemangeol.com/wp-content/uploads/2023/01/Prescribing-Information-Hemangeol.pdf>

3

CREATE YOUR ACCOUNT

Create your username.

Enter information about your child: **name, weight, the dose to be administered and the start date of treatment.**

4

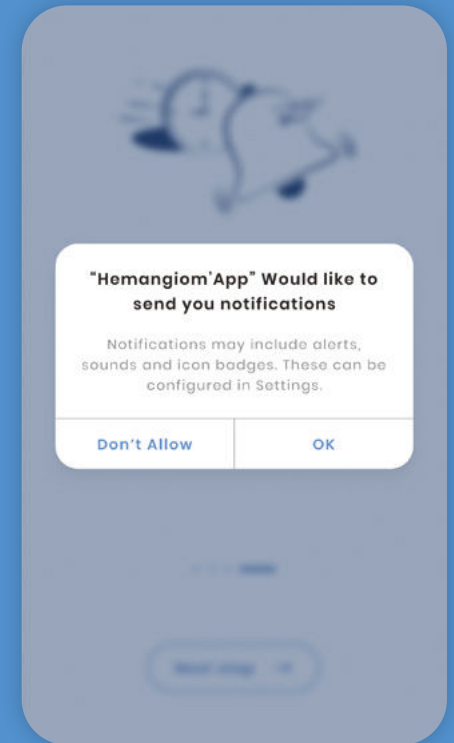

CREATE YOUR OWN TEAM IF NECESSARY

It will make it easier for you to administer doses when.

Your team can comprise up to **5 members**, with **two administrators** (for example: dad, mom) and the others as «caregivers».

5

You will be asked to activate notifications in order to receive dose reminder alerts.

THERE ARE FIVE ICONS AVAILABLE ON THE NAVIGATION BAR TO MAKE IT EASIER TO USE.

ON THE HOME PAGE,

you will find an **overview of upcoming doses**, access the **summary of doses given, scheduled medical appointments and contacts for product information**.

Upcoming doses

IMPORTANT

Only give the treatment during or after a feeding to reduce the risk of hypoglycemia.

[See signs of hypoglycemia](#)

☀️ First dose given at 9:30 AM

Recommended time of next dose:

At least 9 hours between doses. **Before 8 PM or follow your Doctor's recommendations**

🌙 Second dose (≥ 9 hours after first dose)
Dad

Hemangeol 4ml

Propranolol oral solution
